OSSERVAZIONE MENSILE IN LUCE H-alfa (6563Å)

Nel mese di settembre il numero delle protuberanze al lembo è sceso ancora, portandosi a 36,8, e non è stato in correlazione con la salita del numero di Wolf. In queste mese ci sono state due regioni attive (NOAA 11026 e 11027), che non hanno mostrato molta attività cromosferica. Una grande protuberanza il 26/9/2009 ha raggiunto un'altezza in proiezione di circa 180.000 km; la potete vedere nelle immagini sotto.
